Derwent Abstract: ([FR2862540A](#)) **Novelty** - In a composition (A) consisting of a pharmaceutical vehicle containing an active agent (I), volatile silicone(s) (II) and a non-polar, non-volatile phase (III), the active agent (I) is a vitamin D derivative.
Detailed Description - An INDEPENDENT CLAIM is also included for a method for improving the penetration of a vitamin D derivative active agent, involving applying a composition (A) to the skin in the form of a spray.
ACTIVITY - Dermatological; Antiseborrheic; Antiinflammatory; Antiallergic; Immunosuppressive; Antipsoriatic; Antirheumatic; Cytostatic; Virucide; Vulnerary; Anorectic; Antilipemic; Antidiabetic; Antiarthritic; Endocrine-Gen.; Antiasthmatic; Neuroprotective; Cardiant; Antiarteriosclerotic; Hypotensive.
MECHANISM OF ACTION - None given.
Use - Composition (A) is specifically used as a medicament for treating:
(1) dermatological conditions associated with keratinization disorders affecting

differentiation and proliferation, especially acne vulgaris, comedones, polymorphic acne, rosaceae, nodulokystic acne, acne conglobata, senile acne or secondary acne (e.g. solar, drug-induced or professional acne);
 (2) ichthyosis (or similar states), Darrier disease, palmoplantar keratoderma, leukoplasia (or similar states) or cutaneous or mucosa (buccal) lichen;
 (3) dermatological disorders with an inflammatory, immuno-allergic component (with or without cellular proliferation), especially cutaneous, mucosal or ungual psoriasis, psoriatic rheumatism, cutaneous atopy (e.g. eczema), respiratory atopy or gingival hypertrophy;
 (4) benign or malignant, dermal or epidermal proliferation of viral or other origin, especially common or planar verrucas, veruciform epidermodysplasia, oral or florid papillomatosis or T lymphoma;
 (5) UV-induced proliferation, especially baso- or spinocellular epithelioma;
 (6) precancerous cutaneous lesions, especially keratocanthoma;
 (7) immune dermatosis, especially lupus erythematosus;
 (8) bullous immune diseases;
 (9) collagen diseases, especially scleroderma;
 (10) dermatological or general disorders with an immunological component;
 (11) cutaneous disorders caused by exposure to UV radiation, chronological or light-induced skin aging, actinic keratosis and pigmentation or any disorders associated with chronological or light-induced aging, especially xerosis;
 (12) sebaceous function disorders, especially acne hyperseborrhea, simple seborrhea or seborrheic dermatitis;
 (13) cicatrization disorders or stretch marks;
 (14) pigmentation disorders, such as hyperpigmentation, melasma, hypopigmentation or vitiligo;
 (15) lipid metabolism disorders, such as obesity, hyperlipidemia, non-insulin dependent diabetes or syndrome X;
 (16) inflammatory disorders such as arthritis;
 (17) cancerous or pre-cancerous states;
 (18) alopecia, especially due to chemotherapy or radiation;
 (19) immunological disorders, such as asthma, type I diabetes mellitus, plaque sclerosis or other types of selective immunological dysfunction; or
 (20) cardiovascular disorders such as arteriosclerosis or hypertension (all claimed).

In particular the use of (A) for treating psoriasis is claimed. More generally (A) is useful in dermatological and cosmetic applications.

Advantage - Composition (A) provides good penetration of the active agent (I), and is well accepted and tolerated by patients. In particular (A) provides good skin penetration in the absence of (potentially irritating) glycol pro-penetrants.
